Newington-Dover 11238L
July 30, 2012 Update
Complete – Phase 1 Bridge Deck Precast Deck Panels
The 4” thick Precast Concrete Deck Panel installation was completed in late May, 2012. These panels will be overlaid with 5” of reinforced concrete.
Complete – Phase 1 Bridge Deck

On June 21, 2012, Cianbro Corporation and their subcontractors completed the concrete bridge deck overlay placements for Phase 1. The Phase 1 bridge deck comprises half of the total width of the proposed bridge. This surface will ultimately receive a waterproofing membrane and pavement to provide the final driving surface.
Work Underway – Phase 2 Pier Concrete Work
Phase 2 constructs the westerly half of the bridge including the construction of one additional support column and an additional section of the pier cap.
Work Underway – Trestle Removal

The temporary work trestle, which has provided access for the Phase 1 bridge construction will be systematically disassembled in conjunction with the construction of the Phase 2 piers.
Newington-Dover 11238L Contract

• Upcoming work:
  
  – **Bridge:**
    • Construction of the Phase 2 piers working from the center of the channel toward the shoreline on each half of the bridge.
    • Removal of the temporary work trestle.
  
  – **Roadwork:**
    • Roadway approach construction on the Dover side is scheduled to begin in mid to late August 2012.
